

Asset DB®

The MPS Consultancy Toolset

Asset DB

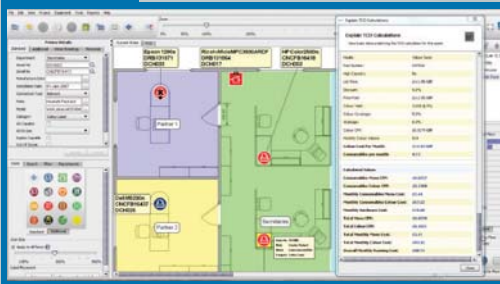

Why do MPS companies choose Asset DB?

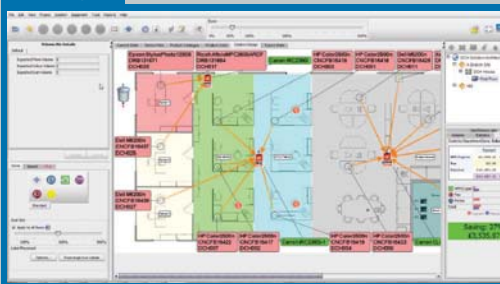

Map

Analyse

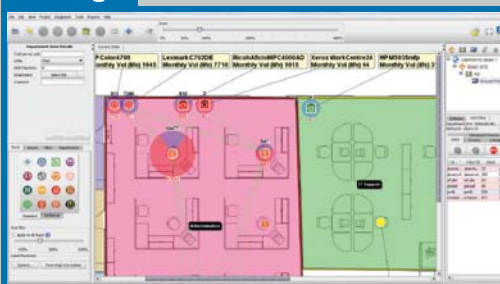

Design

Implement

Manage

Asset DB® is the industry leading toolset for creating and managing optimised print fleets.

Used worldwide by all the leading MPS providers, the unique graphical interface and innovative design of the Asset DB Suite **improves time to market by 70%** and delivers up to **5 times improved data accuracy**.

- A simple graphical interface - **optimised for a Tablet PC**
- Efficiently **map and capture** unique asset attributes
- **Measure and display** walking distances from an asset to a user
- Import and visualise user data from other print management applications
- Easily import and visualise user information concerning device usage
- **Quickly and accurately** calculate total cost of ownership (TCO) and environmental impact
- **Synchronise, share and backup** all data
- **Automatically creates** a single repository of all captured information reducing the need for manual data management
- Prototype MPS designs - with **instant feedback** on full costs & user ratios
- Make **live changes** to designs with clients for faster approval and sign-off
- **Easily create multiple designs** for a single environment to give clients a range of optimisation solutions
- Creates detailed floor-plans, proposals and reports directly from the application to aid implementation and management

The value of a modular based toolset

Asset DB's unique graphical suite has been designed specifically to meet the consultancy needs of an MPS programme. The modular build allows you to tailor the software to your programmes needs. From initial audit and review through future state design and ongoing management Asset DB has a solution to simplify and enhance your MPS proposal.

■ Asset DB Auditor

A graphical data capture and analysis tool optimised for mobile Tablet PC technologies, taking the hassle out of onsite walk rounds. The application is designed for efficient and accurate data collection using an inbuilt database of makes and models, barcode capture and integration with rapid USB data collecting agents. Asset DB has the unique ability to map and display user data, showing who prints what volume to where, providing a powerful visual argument for change.

■ Asset DB Standard

For on-going fleet management - moves, adds, changes, disposals.

■ Asset DB Solution Architect

Prototype future state designs using a visual floor plan view. Simply drag and drop volume and capabilities enabling Asset DB to automatically select the appropriate device from your catalogue of new or retained devices. Solution Architect provides consultants with constant feedback on savings and user to device ratios, making fleet optimisation quick and simple. Once the design is complete Asset DB produces the documents required for implementation, allowing you to easily communicate changes to the client and internal service delivery teams.

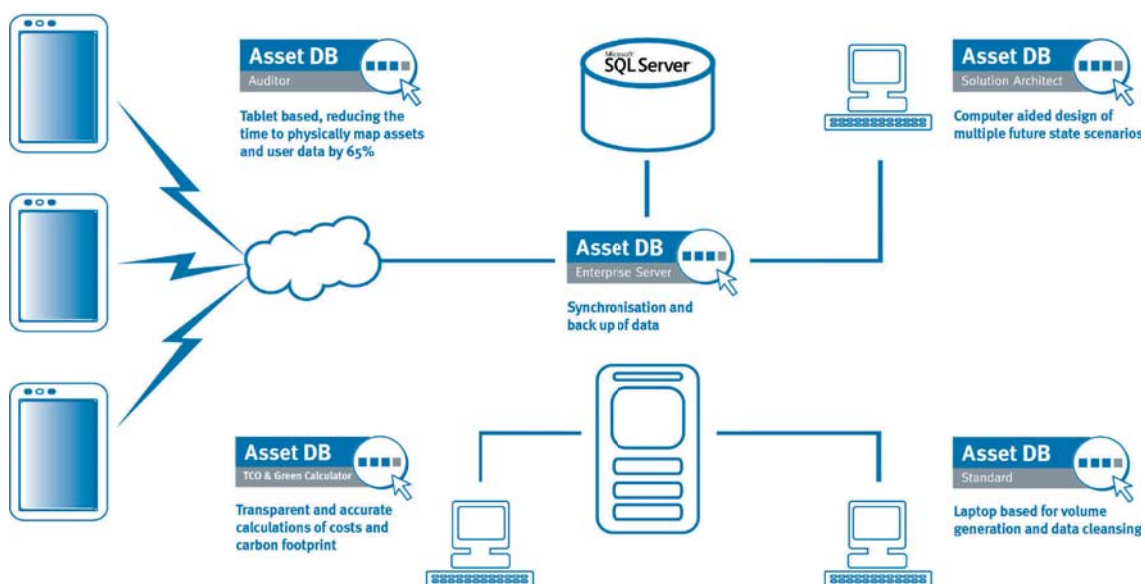

■ Asset DB TCO & Green Calculator

Two features in one module; linked to the NewField IT online database the calculators provide all the up-to-date data required to calculate the total cost of ownership (TCO) and environmental impact of devices captured in your audit. These tools provide the flexibility to deal with different levels of client information and transparent calculations to give your client total confidence in the results.

■ Asset DB Enterprise Server

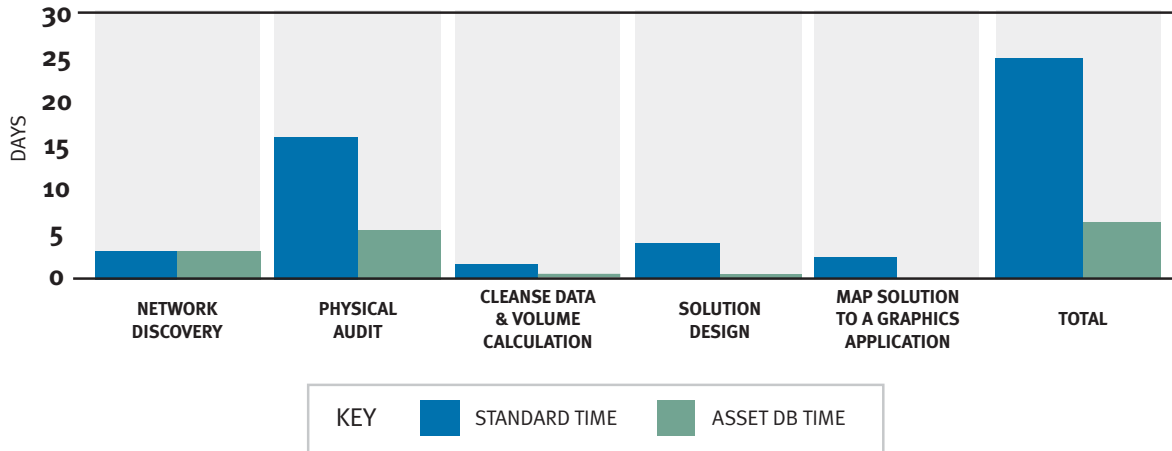

The 'hub' of the Asset DB suite, Enterprise Server enables effective project collaboration and removes the complexities of consolidating data from multiple sources, providing a secure and robust backup of your data. Auditing can be carried out simultaneously at different sites and then centrally synchronised as well as allowing a consultant to start work on a design straight away back in the office.

Asset DB Suite overview: how it works

Asset DB - Delivering real benefits

STEP BY STEP COMPARISON OF SAVINGS

Why you should choose Asset DB

The only floor plan driven MPS toolset	▶	Combines “bird’s eye” view of the user environment with an integrated database
A single data repository	▶	Import and export data from other data collecting agents to create a single master project
Automate solution design	▶	Select from a custom device catalogue and adapt to customer changes at the touch of a button
Increase data capture accuracy by 5 times	▶	Optimises and verifies data entry
Reduce time to revenue	▶	Accelerates by 70% the whole process from data capture to solution implementation
Only pre-sales enterprise class application	▶	Multiple people can work on a project and synchronise their changes

What our customers are saying...

“Asset DB has made the bridge from paper and post-it to digital which truly has made my job a lot easier in many aspects. Thanks and keep up the updates each one brings a new and better enhancement!”

Transition Manager Dell UK

“Thank you for the effort to bring a product to market that puts me hands down above my competition and keep up the good work.”

MPS Modern Office Methods

“NewField IT played a key role in enabling a smooth, trouble-free transition to a much improved working environment, on-time and with the minimum disruption to the business”

Head of Facilities Top 10 UK Law Firm

“The product and product development is excellent. Service support likewise is very good”

Development Manager Océ UK Limited
